

Tissue Regeneration Therapeutics Inc. receives notice of latest patent grant from the State of Israel Patent Office

Toronto, Canada, January 3rd 2016: Tissue Regeneration Therapeutics Inc. (TRT) today announced it has received notice from the State of Israel Patent office that its patent: IMMUNE PRIVILEGED AND MODULATORY PROGENITOR CELLS, has been granted as Israel patent I 95067.

This latest addition to the TRT patent portfolio further validates and extends the TRT stem cell technology platform. This patent has already been allowed in the United States, Australia, Canada, Japan and Korea and is pending in all other major territories worldwide.

TRT is a progressive biotechnology company with a focus on the commercial development of our patented Human Umbilical Cord PeriVascular Cell (HUCPVC) platform technology and its TXP family of cell therapy products. TRT has discovered the world's richest source of mesenchymal stromal/stem cells (MSCs) with potent regenerative, angiogenic, anti-inflammatory, and immuno-regulatory properties. Unique advantages of the TRT HUCPVC platform technology are founded on the highly enriched source of these important cells compared to other tissue sources. Specifically, HUCPVCs represent high cell yields at harvest from tissue normally discarded at birth; high frequencies of mesenchymal stromal cells within the harvested population, their increased biological potential compared to cells derived from adult tissues and their inexhaustible supply.

About TRT

TRT is a Canadian Controlled Private Corporation (CCPC) with a focus on the commercial development of their patented Human Umbilical Cord PeriVascular Cell (HUCPVC) platform technology and its TXP cell therapy products. TRT is the only company in the world to have issued and allowed patents in the USA, Europe and Australasia, for extraction of these unique cells from umbilical cord tissue. TRT provides license opportunities to collaborating partner companies in the regenerative medicine, defense, and family banking sectors.
